4. Orders subject to availability.

Notes

1. Due to seasonal variation essential oils may vary in chemical composition, colour and odour from season to season. Difference in the origin and purity of botanical material, distillation apparatus and storage conditions can also have a significant effect on quality. To minimize these variations many oils are subject to standards set by government authorities or the supplier. Where such standards do exist, Phytoverse will supply oils to our customer's specifications.
2. Whilst most essential oils are supplied as single distilled, some oils are subject to further processing to remove impurities or standardize their composition for specific applications. This can entail a variety of processes ranging from filtering and blending to re-distillation, fractionation, reconstitution and bleaching.
3. Prices may change without notification due to seasonal variation or supply.
